I. Claims 16-23 are generic to a plurality of disclosed patentably distinct species comprising many possible chemical compound structures of the general formulas I-A and I-B. Applicant is required under 35 U.S.C. 121 to elect a single disclosed chemical compound structure for an initiation of a search, even though this requirement is traversed. For the elected single chemical compound structure, applicant is further required to disclose (1) all chemical elements in the structure, (2) all positions of the elements in the structure and (3) all bonding connection between and among elements in the structure for an exact computer generating search. There will be no consideration or search until all of the requirements on the record are met. It is now notified for the record.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

II. Applicant is advised that the reply to this requirement to be complete must include an election of a single chemical compound structure and all requirements on the record to be examined even though the requirement be traversed (37 CFR 1.143).

III. Other issues are not considered until a proper election is made and resolved.
